Additional 1 year guarantee on your Greenstar CDi, Si, Ri or i System boiler when you install a Greenstar System Filter!

Plus you
**prolong the
life of your
boiler!**

Did you know that modern condensing boilers are designed to run with a clean water-heating system?

Over time, running them with dirty water can:

- Damage a boiler and its components
- Cause failures which can reduce overall heating efficiency
- Reduce the SEDBUK rating from band A to band D

The Worcester Greenstar System Filter has been **specifically designed** to combat the damaging effects of debris and pollutants and **prevent** your boiler from becoming blocked.

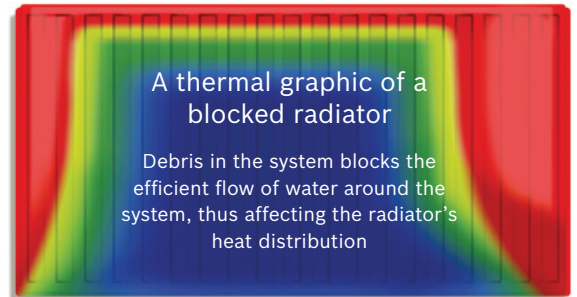

Running the water through the Worcester Greenstar System Filter before it enters the boiler will:

- Create a clean water-heating system
- Prolong the life of your boiler
- Help reduce heating bills by up to 6% per year
- Reduce heating system noise
- Reduce the levels of CO2 emissions

You'll also enjoy peace of mind with the additional 1 year guarantee that's available when the Greenstar System Filter is installed at the same time as qualifying Greenstar boilers between **1st January** and **31st December 2014**.**

This 1 year guarantee is on top of the existing guarantee provided with your chosen boiler.
